

Qualys MD 2.8 New Features

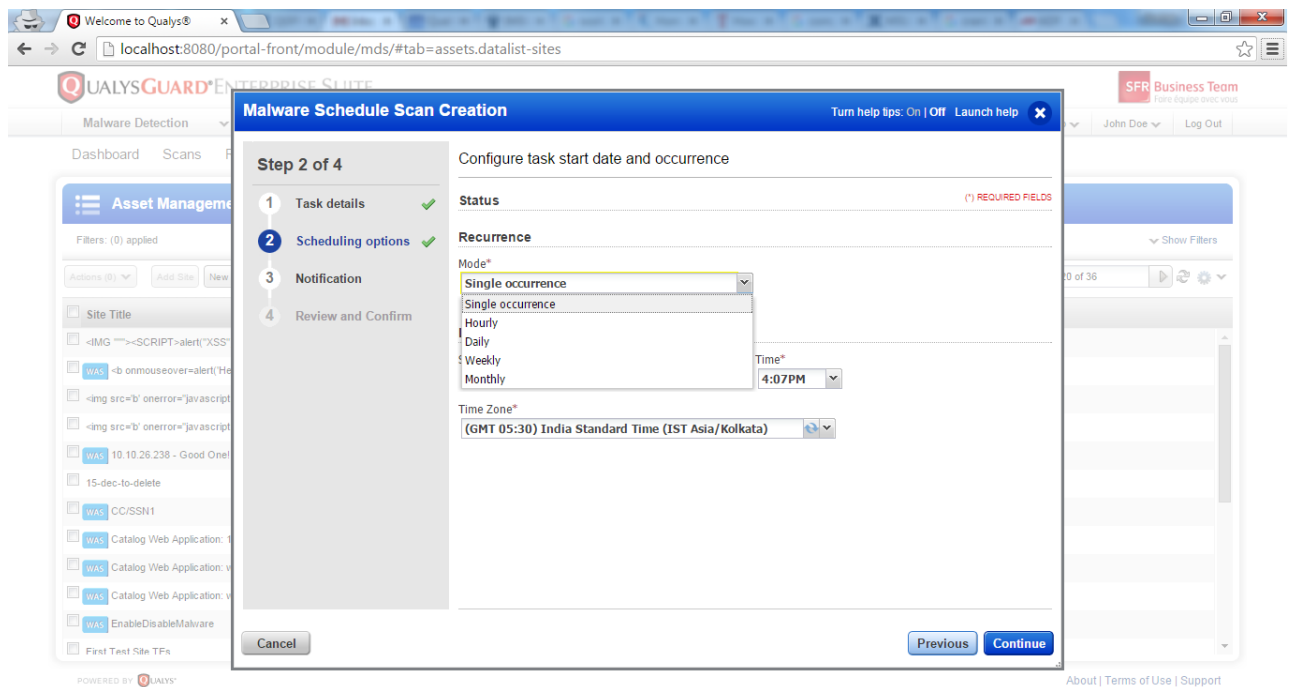

Qualys MD (Malware Detection) provides detailed malware infection reports provided along with infected code for remediation on your web applications. The new Qualys MD 2.8 release now allows customers the flexibility of having scans run hourly!

Features highlight includes:

- Add an hourly schedule option

Numerous customers were looking for an hourly scan schedule option for scanning malware scan enabled sites. The only way to accomplish this previously was to create 24 daily schedules, which was very cumbersome to do. Now users have the flexibility to properly schedule this directly from the UI.

*Please note that this feature must be enabled from backoffice and you will need assistance from your TAM and/or support in order to enable.
